A (VERY SHORT) INTRODUCTION TO RPPG

*REMOTE PHOTOPLETHYMOGRAPHY.

*TRACKS CHANGES OF BLOOD VOLUME UNDER SKIN VIA REFLECTANCE.

*MEASURES HEART RATE (AND MORE) USING SIMPLE R.G.B. CAMERA.

CONTRIBUTIONS

- *REFINED & EFFICIENT SIGNAL-PROCESSING PIPELINE.
(NO TRAINING + WORKS IN REAL-TIME!)

- *TEMPORALLY LOCALIZES INDIVIDUAL HEART BEATS. THUS, CAN ALSO COMPUTE HEART RATE VARIABILITY (H.R.V.).

 - *SETS FIRST BENCHMARK ON VICARPPG AND PURE DATASETS.

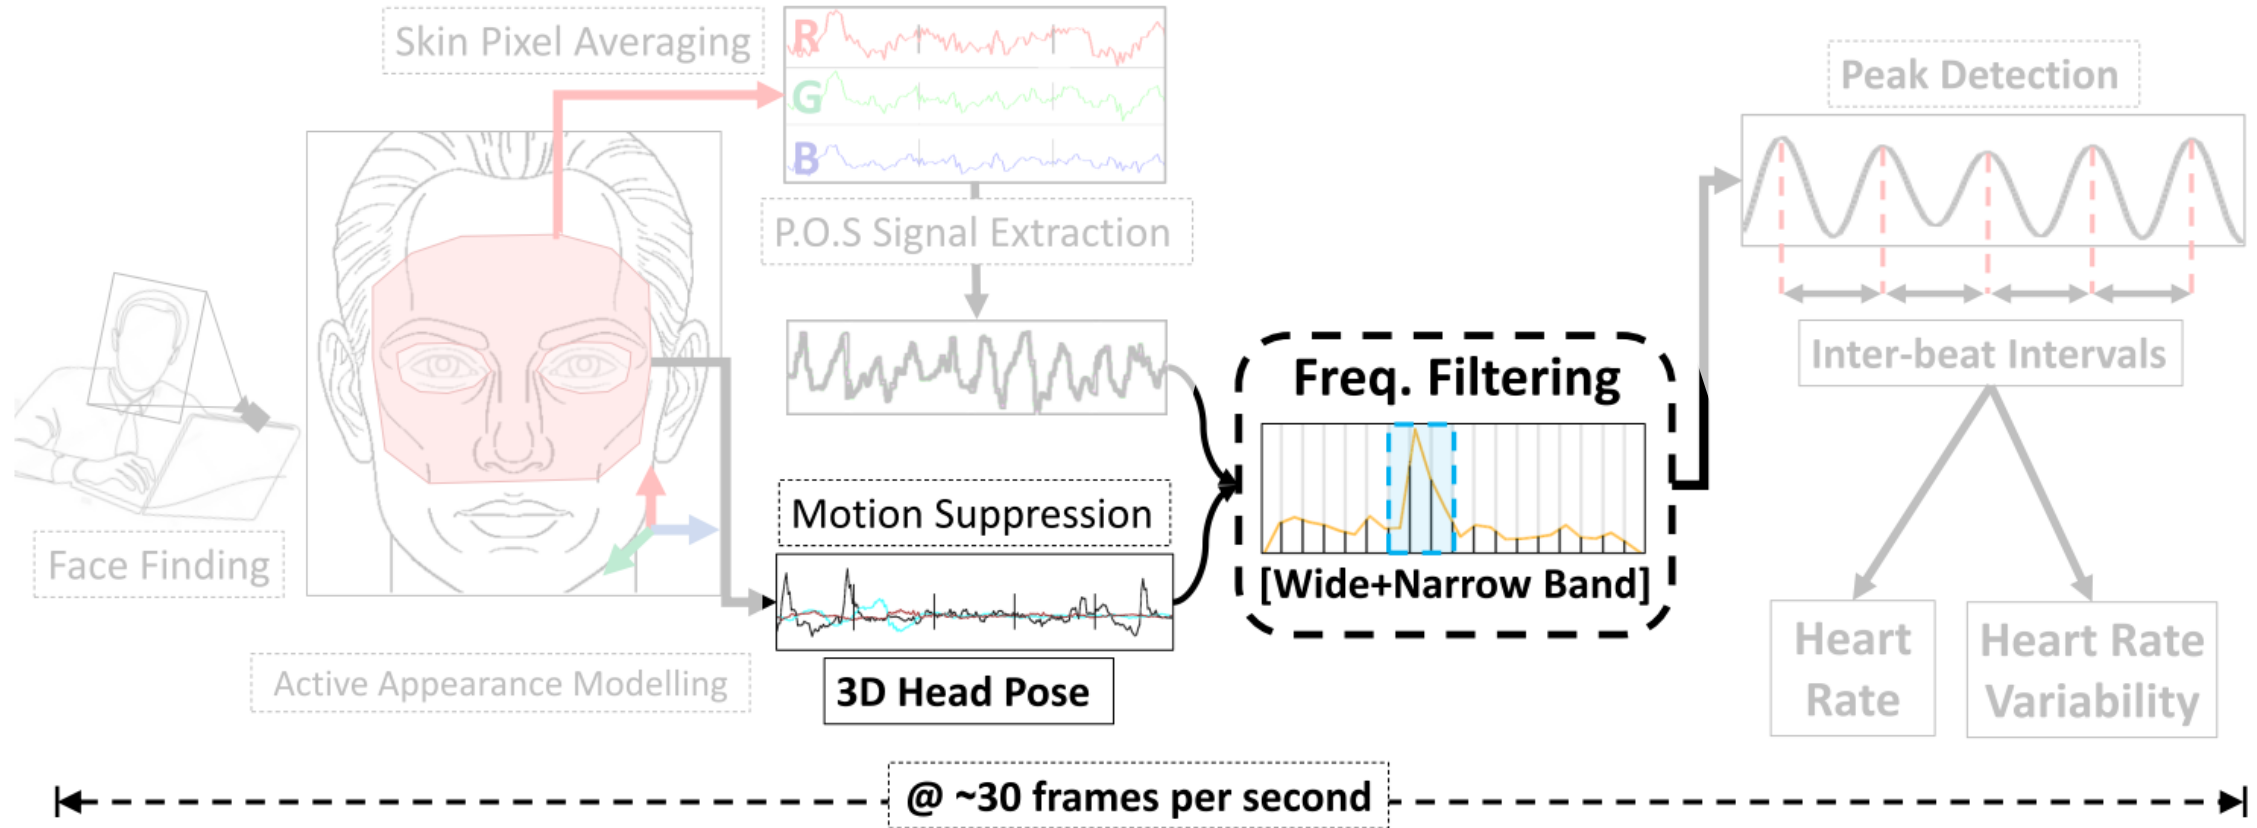

- *STATE OF THE ART RESULTS ON TWO PUBLIC DATASETS.

 - *INTERESTING RESULTS ON OTHERS.

DISCUSSION & CONCLUSION

- * EFFICIENT AND ROBUST SIGNAL PROCESSING PIPELINE (REAL-TIME + NO TRAINING).
- * NON-TRIVIAL FACE DEFORMATIONS STILL A CHALLENGE (LIKE TALKING).
- * SIGNAL PROCESSING METHODS STRUGGLE WITH HIGH COMPRESSION, WHILE DEEP LEARNING SEEM TO OVERCOME THIS. (LEARNS COMPRESSION NOISE?)
- * HOWEVER, THIS SIGNAL PROCESSING METHOD PERFORMS BETTER THAN DEEP LEARNING WHEN COMPRESSION IS LOW. (PRIOR KNOWLEDGE ADVANTAGE?)
- * H.R.V. IS HARD TO MEASURE PRECISELY, BUT STILL QUITE POSSIBLE WITH RPPG.
